Deep Research explores many sources, synthesizes them and delivers a report. Its value lies in the process: defining the question well, reviewing the plan, verifying the sources behind each conclusion and stating what could not be checked.

4	3	1
stages in the process	minimum sources per conclusion	rule: no source, no conclusion

01 Stage 1: define a researchable question

A vague question produces a generic report. A researchable question has a topic, an audience, a time frame and a clear exclusion.

Vague	Researchable
What is happening with education and AI?	Which recent studies in Colombia measure AI use in higher education, for a dean deciding on a program?
Give me information about the market.	Demand for AI courses for adults in Colombia over the last two years, with official or academic sources.

02 Stage 2: review the plan before it runs

Before it searches, the system proposes its research lines. Review them: are official sources missing? Is there a topic you do not need?

- [ ] The plan includes primary sources (agencies, universities, statistics).
- [ ] The lines cover the audience and period you defined.
- [ ] It is clear what will not be investigated.

03 Stage 3: verify the conclusions

1. Each key conclusion needs at least **three sources** or one solid primary source.
2. Open the part of the source that supports the figure or claim; do not stop at the summary.
3. Note the date and author of each source. Discard what is outdated for your question.

4 If two sources contradict each other, record it: the contradiction is information too.

WARNING SIGN

A report that does not separate facts from interpretations, or that states no limits, is not ready for a decision.

04 Stage 4: write the report in your own words

Rewrite the findings in your own words, with the same level of nuance as the sources. State what you could not verify in its own section.

The final report is your responsibility: the tool proposes, you decide.

- [ ] Five-line executive summary.
- [ ] Findings with source and date.
- [ ] Contradictions and stated limits.
- [ ] A recommendation limited to what the evidence supports.

TO WRAP UP

- [ ] I define a researchable question before starting.
- [ ] I verify three sources per key conclusion.
- [ ] I state what I could not verify.
