Claude is an AI assistant that writes, analyzes, summarizes and creates work pieces. It works best as a very fast junior collaborator: it adds speed, but it needs a goal, context and review.

5
elements of a complete request

3
steps before you share a result

1581
personal data law in Colombia (2012)

01 What Claude is and how to think about it

Base rule: the more context you give, the less it guesses. And the more important the decision, the more human review it needs.

02 How to ask well: the five elements

A complete request answers five questions: goal (what it must achieve), audience (who uses it), format (document, table, slides, length), tone (formal, warm, technical) and constraints (what to leave out, what data to use).

Weak example: 'Write a proposal for a client'. Strong example: 'A two-page proposal for a school principal's office in Manizales, formal but warm tone, with objective, a three-month plan and pricing in pesos. Do not promise guaranteed results.'

03 Artifacts: create and edit in the conversation

Artifacts are documents, charts or small applications you see and edit next to the conversation. Describe the final result before asking for content, ask for small changes instead of redoing everything, and compare versions before accepting a change.

Before sharing any Artifact: check figures, names, dates and that it says what you really mean.

04 Projects and memory

A Project keeps the context of one piece of work: instructions and reference files. Create one Project per topic, not one giant Project for everything.

Memory recalls preferences and useful details across conversations. Review it regularly and edit or delete what you do not want kept.

05 Connectors and Skills: delegating recurring work

Connectors give access to your tools (email, documents, calendar) with permissions you approve. Before connecting, read what permissions it asks for. Never give passwords in the chat.

A Skill stores a repeated procedure: instructions, templates and examples. Scheduled tasks run recurring work, such as a weekly summary, using the sources you define.

06 What you never delegate

Never delegate the final decision about people (hiring, dismissals, evaluations), signing legal documents, health diagnoses, or sending communications without human review.

Delegating is not walking away: you set the goal, the limits and the review. Responsibility for the result remains yours.

07 Data protection

Never share passwords or third parties' bank or identity data. Minimize personal data: anonymize before uploading, share only what is necessary, and follow your organization's policy.

In Colombia, personal data processing is governed by Law 1581 of 2012. Consult your legal team for sensitive cases.

08 Review protocol before sharing

- [ ] Did I verify every figure, citation and name against the original source?
- [ ] Does the content match the goal and the audience?
- [ ] Did I remove personal or confidential data that should not be there?
- [ ] Did a responsible person review and approve the decision?
- [ ] Did I disclose the use of AI where appropriate?

TO WRAP UP

- [ ] Did I verify every figure, citation and name against the original source?
- [ ] Does the content match the goal and the audience?
- [ ] Did I remove personal or confidential data that should not be there?
- [ ] Did a responsible person review and approve the decision?
- [ ] Did I disclose the use of AI where appropriate?
