MODULE 1 · RESPONSIBLE USE

Privacy and Responsible Use of AI

Personal data, minors, bias and transparency for using AI with judgment

Module 1
IALab · Edutechlife

Handbook 2026
Teaching guide

edutechlife.co
Content 2026

AI is useful when you know what you hand over, how you verify what you receive, and whom you must tell that you used it. This handbook gathers the principles every student and professional should apply.

1581
data protection law in Colombia (2012)

4
principles of responsible use

3
questions before sharing

01 Why privacy matters

Every text you paste into an AI tool is information that leaves your computer. Often you do not know how it is stored, who can see it, or whether it is used to improve services. Treating privacy as a habit, not a formality, is what protects it.

02 A practical dilemma

A case that repeats in classrooms and offices: someone must write an essay and asks the AI to write all of it. What happens to their learning, their honesty and the quality of what they hand in?

Option A · Hand it in unread

Ask the AI to write the whole essay and submit it as is.

- Academic dishonesty
- Risk of spreading unverified information
- Loss of learning and critical thinking

Option B · AI as scaffolding

Use AI to structure ideas and check grammar, but write the text yourself.

- Keeps intellectual authorship
- You understand what you write
- Improves your text with your own judgment

03 Data you should not share

Type of data	Example	Why
Identification	ID number, passport, date of birth	Enables identity theft
Financial	Account numbers, cards, income	Risk of fraud
Health	Diagnoses, medical records	Sensitive data with special protection

Type of data	Example	Why
Minors	Names, schools, grades of children or teenagers	Stronger legal protection
Credentials	Passwords, verification codes	Direct access to your accounts

04 Law 1581 of 2012

In Colombia, **Law 1581 of 2012** regulates the processing of personal data. Its principles are the foundation of responsible use:

Purpose

Data is used for a clear purpose that the person has been informed of.

Security and confidentiality

Whoever processes data must protect it and limit access.

Accuracy

Data must be accurate, complete and up to date.

Freedom

No one may use your data without your prior authorization.

As the data subject, you can know, update, correct and delete your data, and revoke the authorization you gave.

05 Anonymize before uploading

1. Remove names, emails, phone numbers and addresses from the text.
2. Replace people with roles: “student A”, “the patient”, “the supplier”.
3. Round or change sensitive figures without changing the conclusion.
4. Check headers, signatures and hidden metadata in documents before uploading them.

06 Bias: how to spot it

A model learns from data created by people and can repeat their inequalities: stereotypes of gender, region, age or socioeconomic level. Bias is not always obvious; sometimes it shows up in what the answer leaves out.

- [ ] Ask for the same task with different profiles and compare.
- [ ] Ask what perspectives are missing from the answer.
- [ ] Verify with diverse sources before deciding anything about people.

07 Transparency: declaring AI use

Saying when you used AI builds trust and prevents misunderstandings. Declare the use when AI took part in a text, an image, an analysis or a decision, and explain which part you reviewed yourself.

SUGGESTED WORDING

"This draft was prepared with AI support and reviewed and revised by me. The figures were checked against the sources cited."

08 Minors

When AI is used with children or teenagers, a responsible adult supervises the use, chooses the tools and prevents the sharing of the minor's data. Data about minors has stronger protection.

09 Checklist before sharing

- [ ] Did I verify every figure, citation and name against the original source?
- [ ] Did I remove personal or confidential data that should not be there?
- [ ] Did a responsible person review the decision?
- [ ] Did I declare the use of AI where appropriate?

TO WRAP UP

- [ ] I share only what is necessary and anonymize what is personal.
- [ ] I verify what AI gives me before using it.
- [ ] I declare when I used AI and protect the data of others and of minors.
