Content 2026

Investigating well means checking. These templates take Gemini into real cases, ask for sources in every answer, and leave a record of what you verified.

field exercises	columns in the evidence table	sources before you conclude

01 Before you start

Gemini changes often. Before each exercise, check which model your account offers and which features your plan includes. Note the date of your research: a source from two years ago may no longer be valid.

02 Exercise 1: a local competitor map

Identify three competitors in your city or sector and compare them using public sources.

PROMPT

```
Research the three main [service] providers in [city].
For each one, deliver: value proposition, published price, contact channel and
the source of each fact.
If a fact does not appear in a public source, write “not verified”.
```

03 Exercise 2: verify a news item

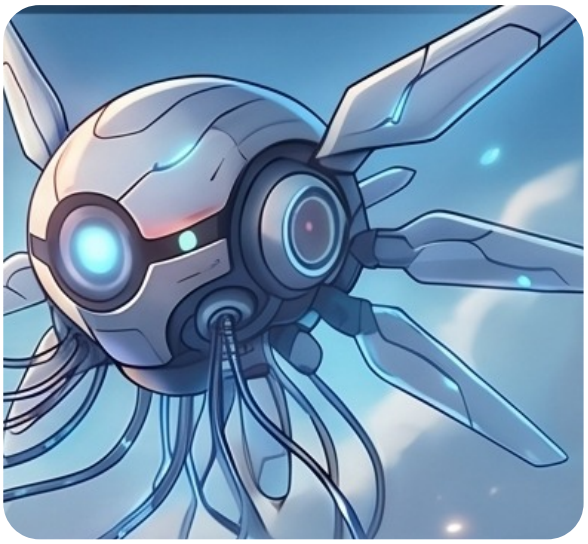

1. Copy the headline and the sentence that caught your attention most.
2. Ask Gemini to find sources that confirm it and sources that contradict it.
3. Open at least two primary sources (official bodies, media with named authors).
4. Classify the item: confirmed, partial, not verified or false.

04 Exercise 3: a report with Deep Research

PROMPT

```
Investigate [topic] for [audience], using sources from the last [years] years.
Deliver: 1) a five-line summary, 2) findings with their source, 3)
```

```
contradictions between sources, 4) what you could not verify.
```

A good report is a verified report.

BEFORE YOU USE THE REPORT

Open three sources that support the key conclusions. If a figure does not appear in the cited source, do not use it.

05 Exercise 4: summarize your email thread

If you have a long email thread, you can ask for a summary of the open decisions. Always check the summary against the original thread before replying.

PROMPT

```
Summarize this email thread as: 1) context in two lines, 2) decisions made, 3)
open items with owner and date if one appears.
Do not invent dates or owners: if they are not in the thread, write “not
stated”.
```

06 Evidence table

Keep a record of what you researched. Every important claim needs a row.

Claim	Source	Date	Verified (yes / no)	Notes
E.g.: the price rose 10%	Link or official document	Publication date	Yes	Checked in the original

Claim	Source	Date	Verified (yes / no)	Notes

07 Common mistakes

Mistake	How to avoid it
Trusting the summary without opening the source	Open the part of the original that supports each conclusion
Using undated sources	Note the date and drop anything out of date
Mixing facts with opinions	In the table, separate what is verified from what is interpretation
Pasting personal data about others	Anonymize before sharing documents

TO WRAP UP

- [ ] Before researching, I checked the model and plan of my account.
- [ ] Every important claim has a source in my evidence table.
- [ ] I do not use a figure I cannot find in the cited source.
